

Supplementary tables

Table S1 | Comparison of response surface models for $\mu_{\max}$ and $N_{\max}$ across light and medium dilution factors for flask and microplate data. $R^2_{\mu_{\max}}$ cal: R^2_{param} for parameters of $\mu_{\max}$ on calibration conditions, $R^2_{\mu_{\max}}$ val: R^2_{param} for parameters of $\mu_{\max}$ on all conditions, $R^2_{N_{\max}}$ cal: R^2_{param} for parameters of $N_{\max}$ on calibration conditions, $R^2_{N_{\max}}$ val: R^2_{param} for parameters of $N_{\max}$ on all conditions. For each model, the first row corresponds to flask data  and the second row to microplate data .

Model	Mathematical expression		$R^2_{\mu_{\max}}$ cal	$R^2_{\mu_{\max}}$ val	$R^2_{N_{\max}}$ cal	$R^2_{N_{\max}}$ val
Monod double	$\beta_0 \frac{L_0}{L_0 + \beta_1} \frac{C_0}{C_0 + \beta_2}$		0.851	0.515	0.917	0.955
